Ottawa, Ontario, K1A 0C6 (Canada)

ACKNOWLEDGMENTS

The Centre acknowledges Christiane Hansen and Voyteck Polanski for technical assistance and recording of data; Henry Mucha for assistance in computer programming; Diane Gosselin and Paul Panich for assistance with the telephone survey of sheep breeders.

PREFACE

The first National Workshop on Conservation of Animal Germplasm in November 13-14, 1990 recommended that the Research Branch of Agriculture Canada should play a leading role in conservation of animal genetic resources. This came as a result of the Branch's mandate in research, the availability of scientific expertise in genetics and cryopreservation, as well as live animal resources at various locations across Canada.

It was realized that animal genetic resources in Canada should be catalogued by establishing a data bank capable of networking with similar data banks in other organizations and countries. In response to this recommendation, the Centre for Food and Animal Research (CFAR) is therefore assembling inventories of Canada's animal genetic resources.

This publication documents the inventory of Sheep Breeds in Canada. It has been prepared with information provided by sheep breeders across Canada. We value their willingness to help us in developing this public domain database and catalogue. Only breeders that have provided consent to Agriculture and Agri-Food Canada for the disclosure of their information are shown in the listing. The summary has been prepared from information provided by all breeders surveyed.

Although every attempt was made to contact all sheep breeders in Canada, some may have been unintentionally excluded. Breeders that have not been included, such as those that did not complete the questionaire are welcome to participate in future editions. Although, the sheep statistics change rapidly with lambing, purchase, sale and mortality the numbers presented can be used as a guideline to establish the status of sheep genetic resources in Canada. This information will be useful in developing strategies to prevent the erosion of genetic diversity in domestic animal species and to secure Canada's food and agriculture needs in the future. This inventory would not have been possible without the support of individuals from universities, governments, research centres, commercial breeding establishments, non-governmental organizations and sheep breeders across Canada.

Dr. André C. Lachance, Director
Centre for Food and Animal Research
Agriculture and Agri-Food Canada, Ottawa, Ontario, K1A 0C6 (Canada)

SUMMARY OF SHEEP BREEDS IN CANADA 108

ABBREVIATIONS USED IN THIS PUBLICATION

CLRC	Canadian Livestock Records Corporation
KHSI	Katahdin Hair Sheep International
SLA	Swedish Livestock Agency
ROP	Record of Performance Program
A.I.	Artificial insemination
UK	United Kingdom
USA	United States of America
NZ	New Zealand

DESCRIPTION OF TERMS

Adult	Sheep older than one year of age
Lamb	Sheep up to one year of age
Availability	Sheep for sale
Breeder flock	'Yes' indicates that the farm produces animals for breeding
